

EECS 349 Project Proposal

Due 11:59PM Wednesday, April 19

Assignment

The project proposals should be a one-page PDF file and should cover the following four points:

- What **task** will you address, and why is it interesting? You want to make this convincing, so spend about two paragraphs on this.
- How will you acquire your **data**? This proposal is intended to serve as a sanity check that your project is doable -- so if you're inventing a new data set, be as specific as possible here.
- Which **features** will you use for your task?
- What will your **initial approach** be? I.e., what data pre-processing will you do, which ML techniques (decision trees, nearest neighbor, etc.) will you try first, and how will you evaluate your success?

Here's how to turn your proposal in. Let us know right away if you have any issues with this turn-in procedure:

- Create a group in the Project Group set in Canvas, and include all your group members. Any size group is allowed. Create a group even if you're working alone.
- One person in the group should turn in the PDF report in Canvas.
